2-4 working days when back in stock*.
*Lead-times can vary slightly.

Heavy duty galvanised welded wire mesh with a green PVC plastic coating. The 90cm x 25m PVC coated steel mesh is supplied with a 50x50mm square mesh hole (2"x2"). Manufactured from high strength 2.5mm thick steel wire (12 gauge swg) before PVC coating, the final wire thickness is 3mm. The mesh is welded before galvanisation and finally coated in the attractive weather-resistant green pvc coating.

Use primarily as a boundary fence and garden fencing, the steel mesh is easily erected to existing fencing and rail or to timber fencing posts using galvanised u-nails, fencing line wire and tensioners if required.

The galvanised protection, ensures that the steel will be rust and corrosion resistant.

Heavy duty PVC Coated steel mesh fencing uses

- Perimeter fencing
- Boundary and garden fencing
- Dog and Pet enclosures
- Security Fencing
